PROFILE

I am a software developer and a 3rd-year computer engineering student at Çankaya University. I am interested in web development, cyber security, algorithm solving, artificial intelligence, and game development. I have participated in various game jams in the last couple of years and made video games from scratch both with teams and independently. Additionally, I have competed in Latin & standard ballroom dances for six years. Being a successful athlete requires a lot of discipline and responsibility and I believe those qualities that I have translate into my work ethic as a developer. I want to work at a company that has clear goals and a motivating vision.

EXPERIENCE

EKON INFORMATICS

Aug 2021 - Sep 2021 / Ankara, Turkey

INTERN - CYBER SECURITY

- During my 1-month internship at this company, I learned about cyber security fundamentals & tools and applied some basic principles.
